

Asset Management of Transportation Systems (Bridges)

November 9, 2018

Performance Management

Performance Management of the Federal Highway Program is a **systematic approach to making investment and strategic decisions** using information about the condition and performance of the system and developing an approach **to achieve a desired set of national goals.**

Asset Management

Asset management is a **strategic and systematic process of operating, maintaining, and improving physical assets, with a focus on engineering and economic analysis** based upon quality information, to identify a structured sequence of maintenance, preservation, repair, rehabilitation, and replacement actions that will achieve and sustain a **desired state of good repair** over the lifecycle of the assets at minimum practicable cost. (23 U.S.C. 101(a)(2), MAP-21 § 1103)

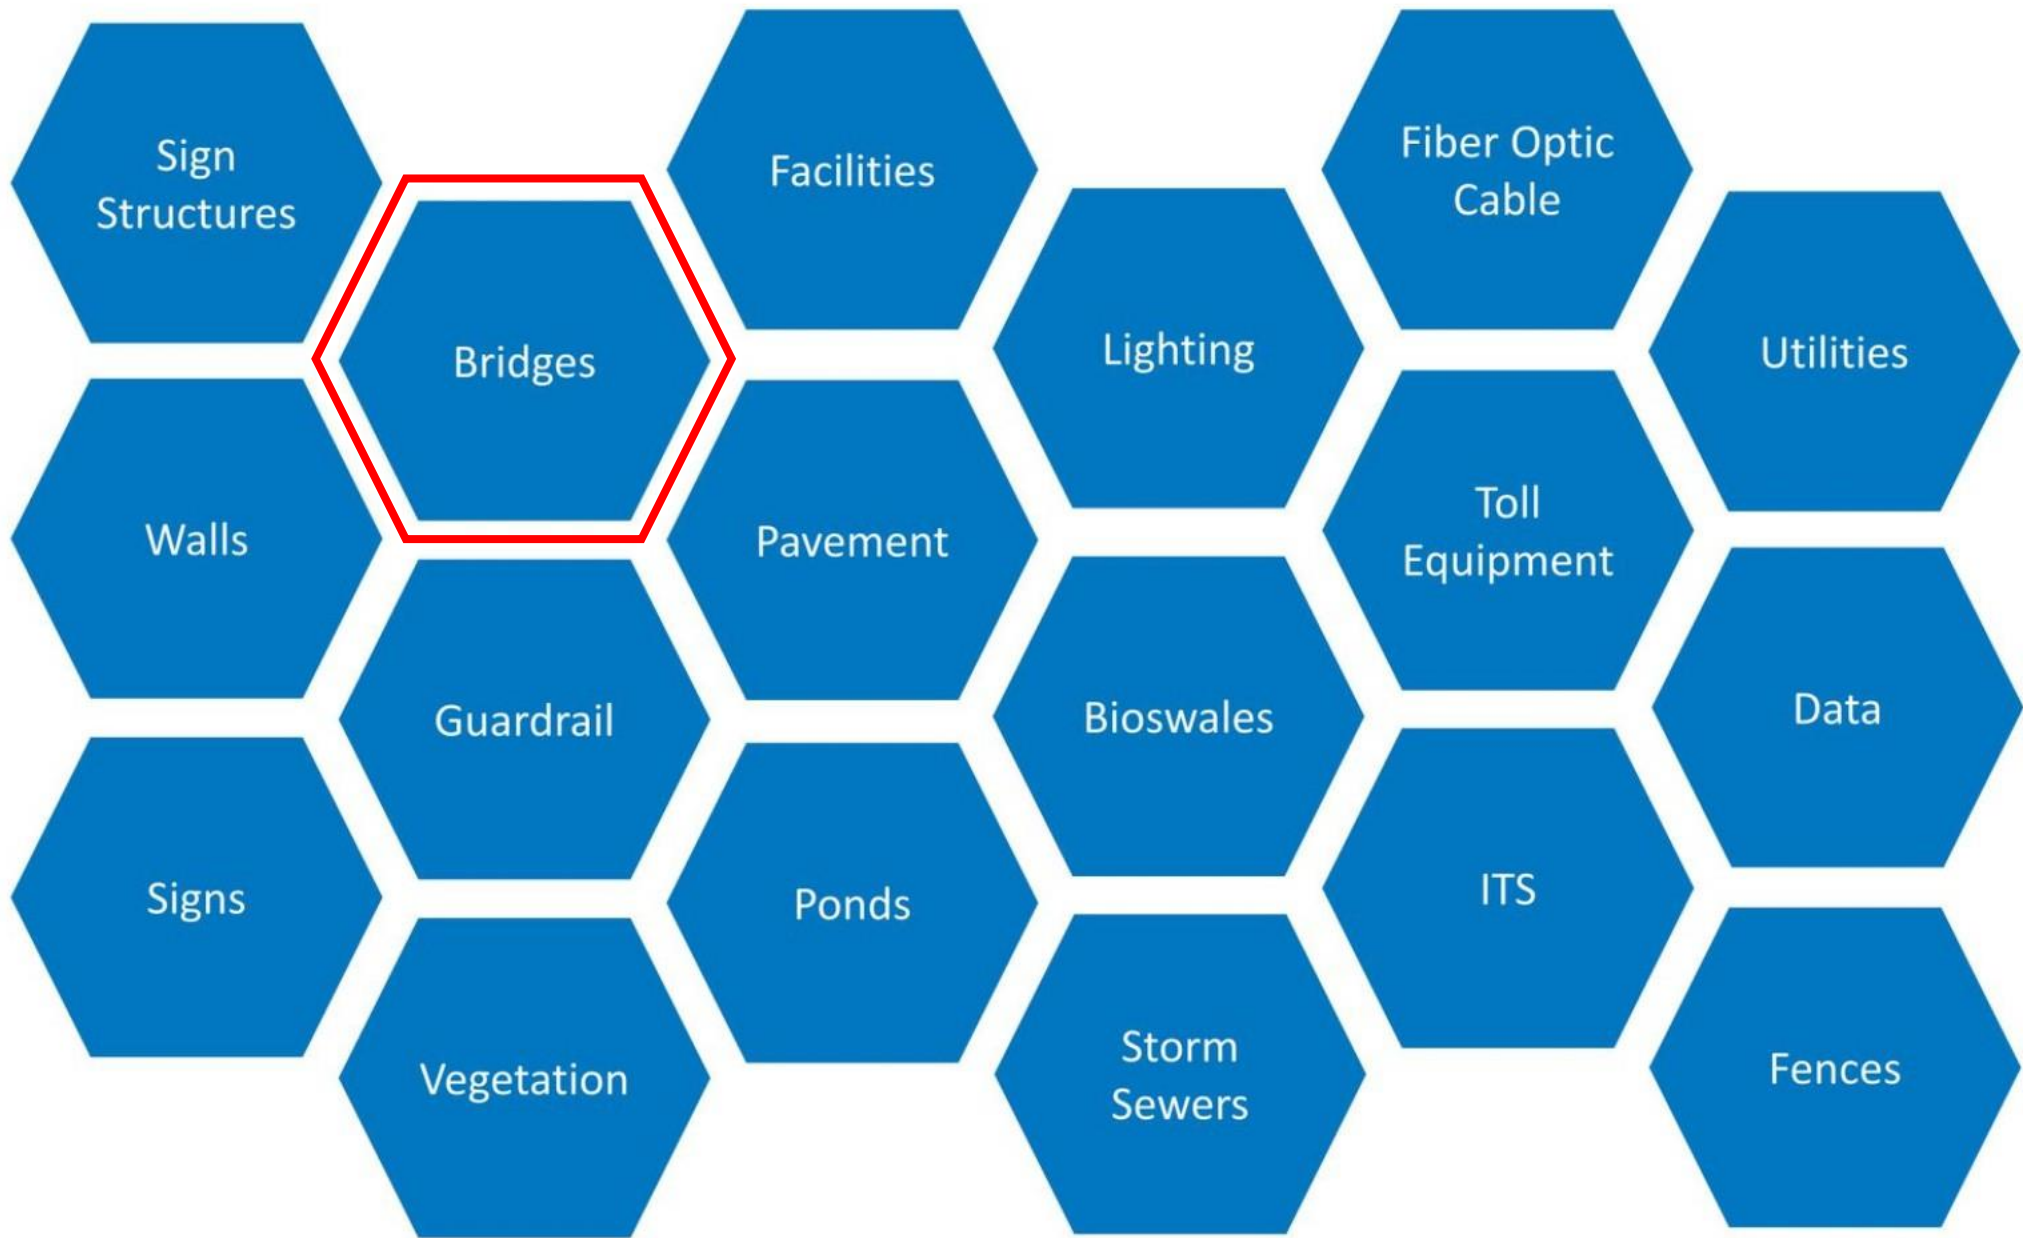

Why Asset Management?

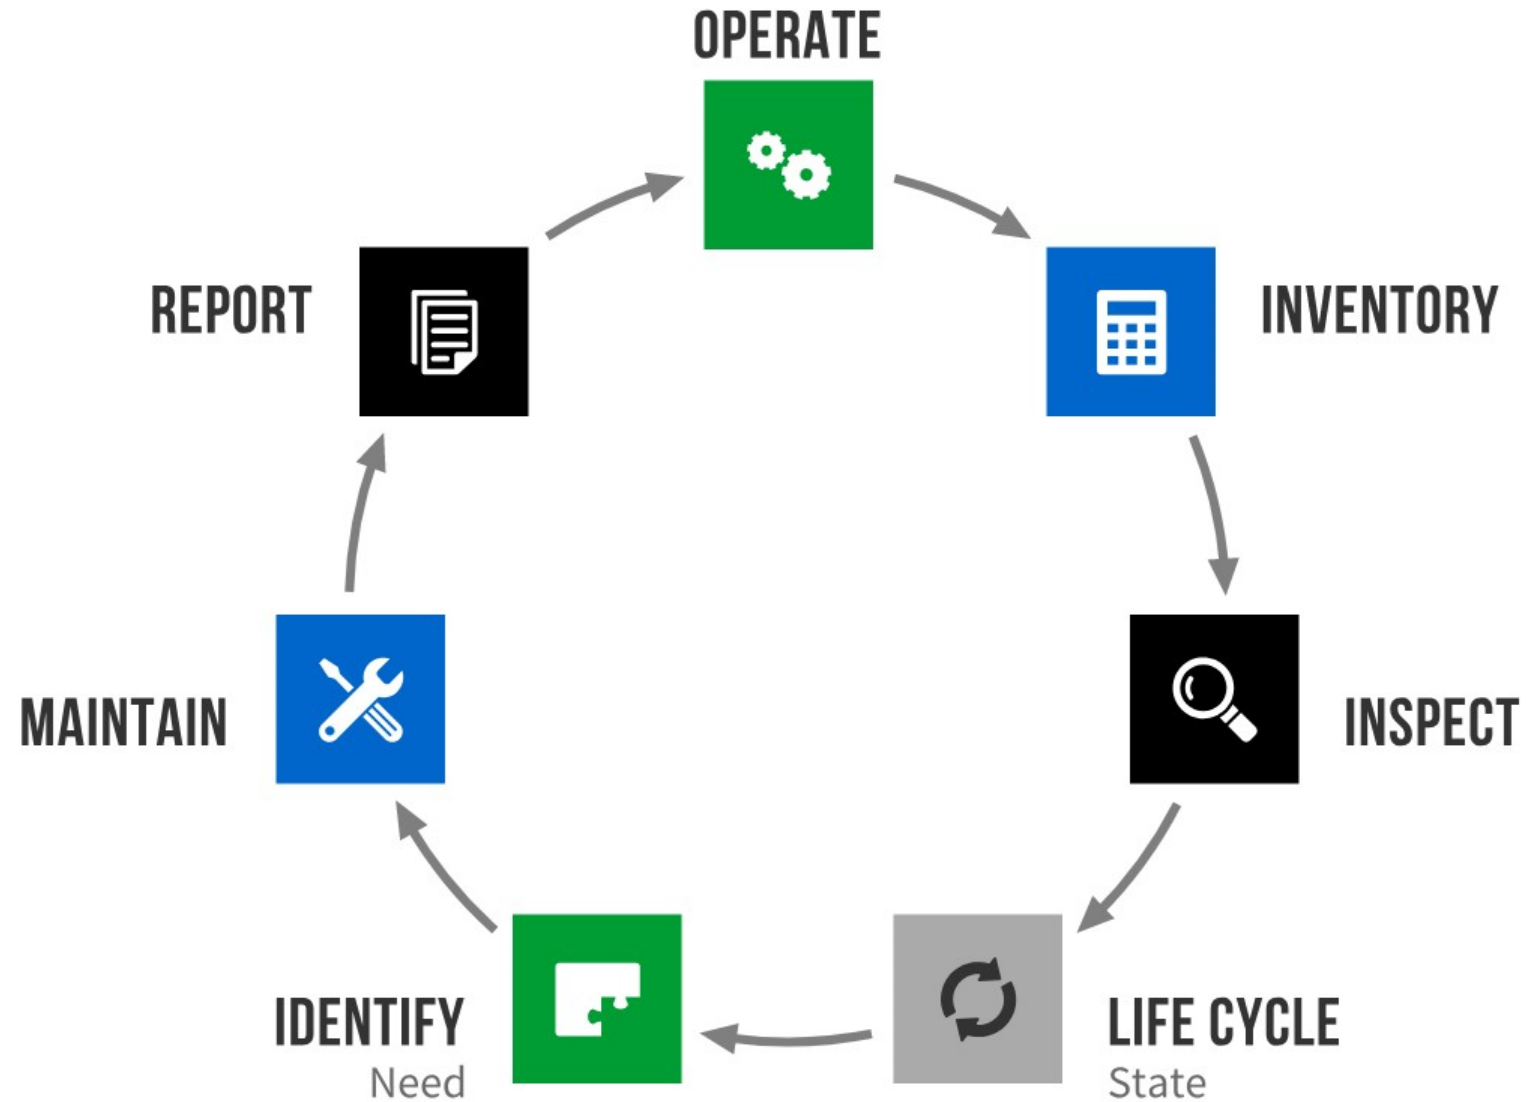

- Lack of recourses to maintain the existing system at the desired level of performance.
- Ensure future investments are strategic and emphasize quality of life and economic growth.
- Create a culture through training and communication where transportation asset management is a way of doing business.

Small, planned
investments in
maintenance saves
money in long run

Proactive Preservation

INVENTORY

- Use of a Asset Management Software to manage inventory.
- Inventory reflect changes in the system periodically.
- Inventory reflect the different type of ownership.
- Digest the structure into quantities.

INSPECT

- Inspection Program is critical to feed the state of the Bridges.
- There is two types of inspection:
 - Condition based rating Inspection system.
 - Quantity based Inspection system.

LIFE CYCLE

State

- Based on the bridges location estimate life cycles.
- Estimate Deterioration Curves for the life of the structure.
- Prepare cost scheduling for estimated cost of deterioration.

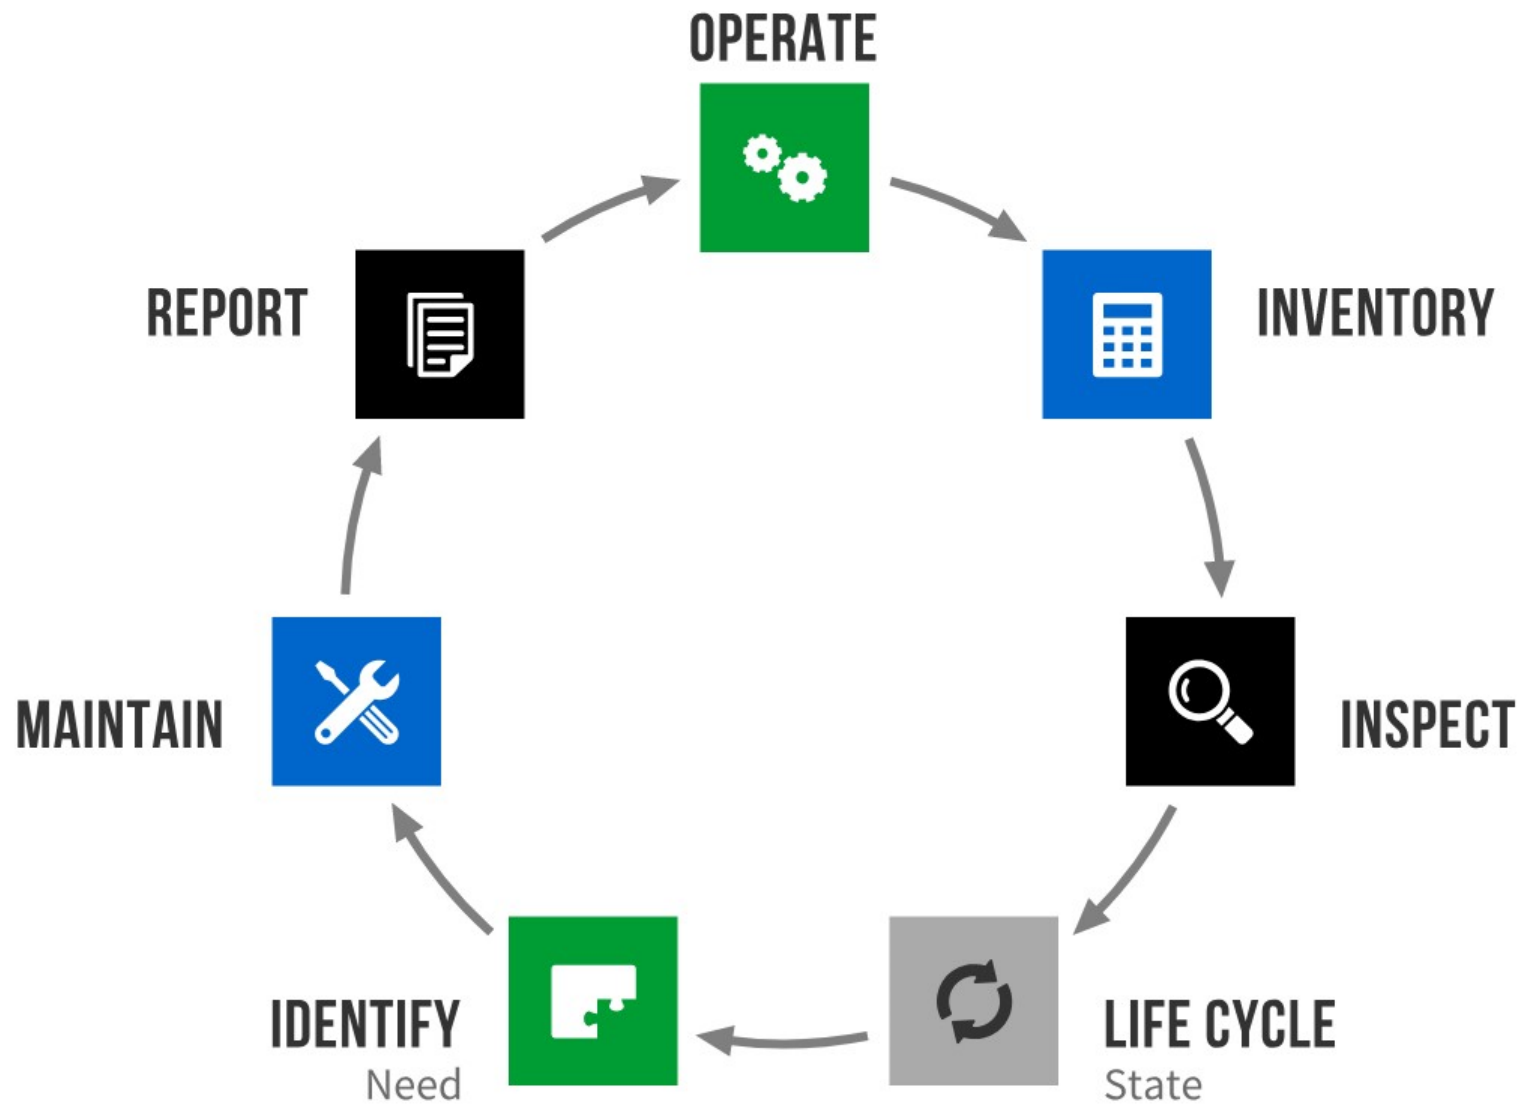

IDENTIFY

Need

- Identify the need of repairs and projections to prepare programs of maintenance.
- Apply any needs for future expansion and operation needs.

MAINTAIN

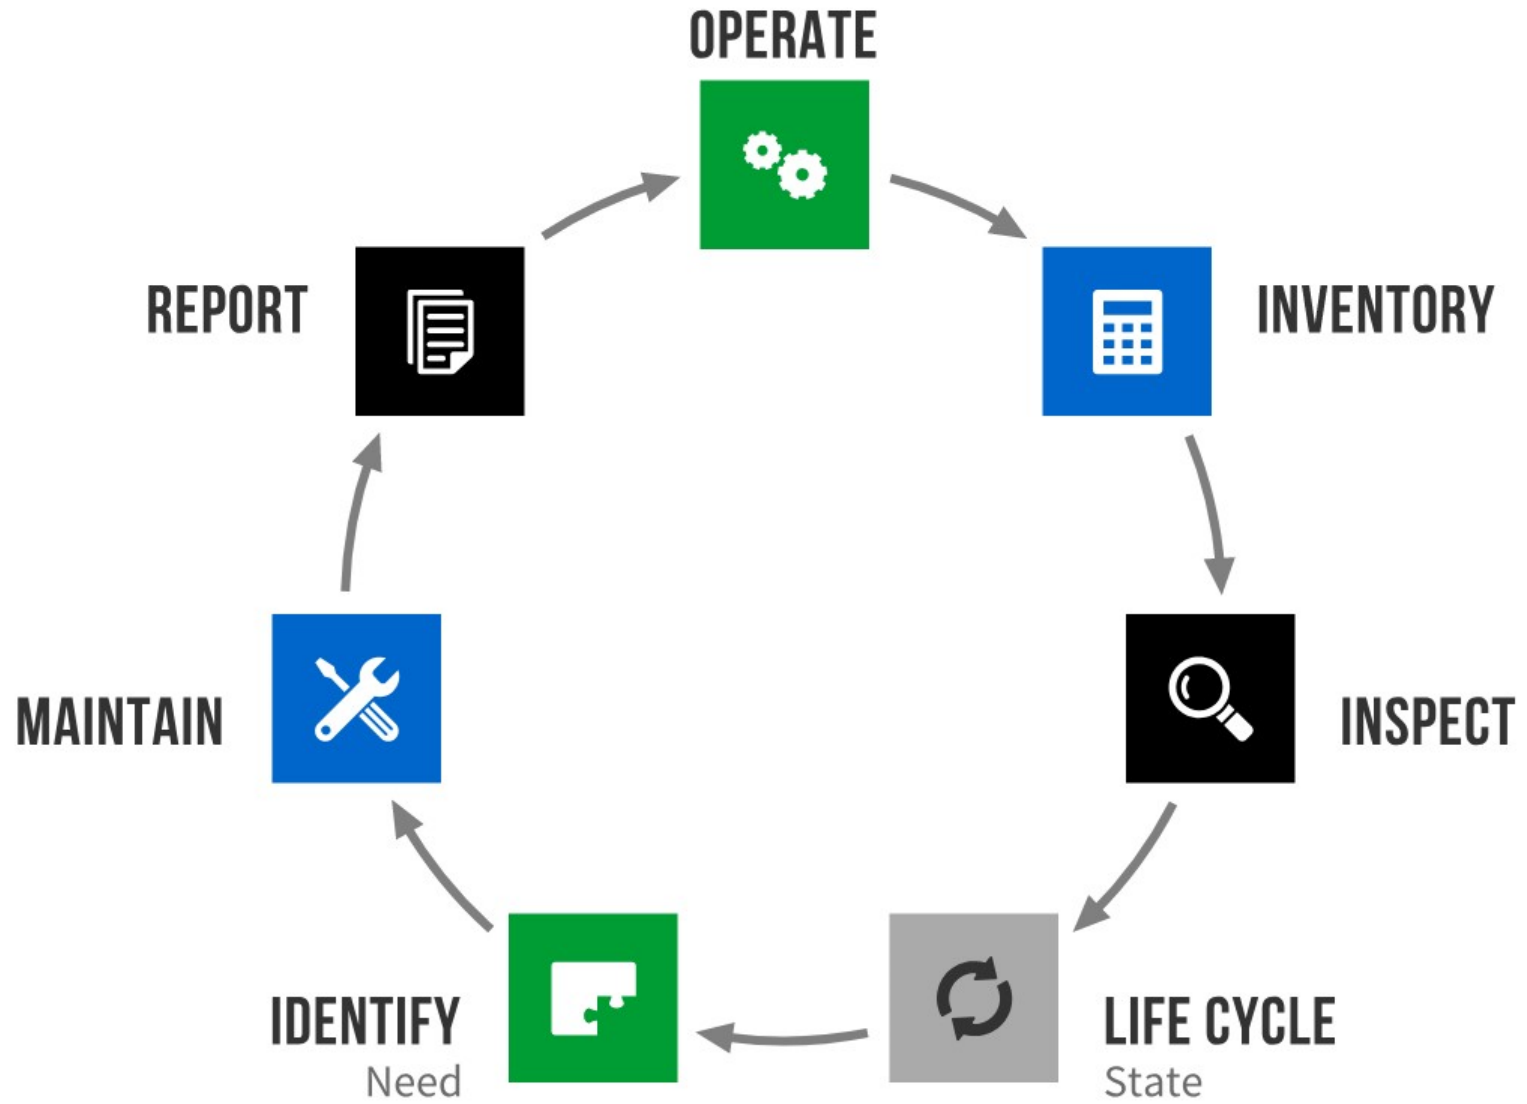

- Perform the maintenance.
- Use of Asset management Software to manage repair tasks.

REPORT

- Report on the completion of repair tasks.

Thank you
